MATH 352

Complex Analysis

Spring 2006

Final Exam Essay

Instructions:

This essay is 15% of the final exam. It is due at the time of the final exam or at a time you negotiate with me individually.

Suppose the Math Club publishes a monthly newsletter for math and science majors. Write an article that describes complex analysis for this newsletter. Consider your target audience to be math and science majors who have completed the calculus sequence and linear algebra but who have *not* taken complex analysis. Your goal is to give those students guidance in making an informed decision about taking a course in complex analysis. Focus on aspects of complex analysis that you think are important or interesting. You do not need to summarize every idea that we have covered this semester. Your opinion of complex analysis does not need to be positive.

I will evaluate your article using the criteria described in the rubric on the reverse.
